

SC.912.L.16.13 – Reproductive – Example 5 Answer

Which of the following describes fertilization?

- A. cell differentiation to form a blastula**
- B. formation of germ layers in a deuterostome**
- C. a sperm joining an egg to form a zygote**
- D. sperm and egg production**

Answer

C. a sperm joining an egg to form a zygote

Fertilization of the egg by a sperm happens in the uterine tube and the zygote begins to undergo mitosis to form a blastocyst.
